In a Pocket Chart - Use three or four (or even all) of the ways each number is represented, but for only several numbers at a time. Have students match all the cards for number one together, number two together, etc.

A Really Big Challenge - Use all the cards and have students line up all the cards that represent one in a row, then two underneath or beside that, then the threes, until they are done with all 160 cards. Have one center group start the Really Big Challenge and the rest add to it. It might take more than one day to finish, but it's a great class community project they can be proud of!
